## **Motor Pricing**

How to figure what size motor you will need.

Once you have found the square footage of your shutter you will multiply that by the pounds the shutter weighs. Sq. ft. x Lb. = weight.

Slat weights: per Sq. Ft.

40mm = 1.41 lb.

58mm extruded = 2.2 lb

60mm extruded = 2.4 lb.

Shutters more than 9 ft. high: add 10% to the effective load for every additional 3 ft.

Double span shutters: add 20% to the effective load to be lifted.

On the next page are the prices for the motors. These prices are subject to change, only when the price goes up to us. The price includes the bracket and crown and drive. The override motors do not include the universal.

All motors have a 5 year limited warranty from Simu. A copy of the warranty is enclosed.

Simu motors have a remote system that is included in the motor itself.

### Pricing that is not included with the motor:

Designer switch	\$13.50
1 Channel remote	\$53.58
5 Channel remote	\$59.42

The motors listed on the next page are all Simu, which is a major brand. We also carry other major brands with the same warranty. We also carry an off brand and that costs about \$30 less than the Simu. The off brand only comes in 2 sizes – 540 and 6100. We use Simu unless requested other wise.

We can also do shutters that require sun, wind, and computer controls. They are priced on a per job basis.

Shutters that weigh over 450 pounds and/or are taller than 14 feet may require an 800 series motor. If so, there is an up charge of \$150 to allow for the heavy duty tube and components that are required.
